EXAMINER'S AMENDMENT

1. This action is responsive to amendment received on March 5, 2007.

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

- **3.** Authorization for this examiner's amendment was given in a telephone interview with Mr. James Morris on March 26, 2007.
- **4.** The application has been amended as follows:
- 1. (Currently amended) A method of increasing throughput of a server capable of servicing at least one TCP/IP connection with a client, the server creating a TCP/IP Transmission Control Block (TCB) stored in non-paged pool (NPP) memory containing information required to identify and to service the client connection, comprising:

closing a TCP/IP connection between said client and said server;

excluding information from the TCB not required to identify the client connection to form a timed-wait state TCB (TWTCB) for a time-wait period; and

releasing the NPP memory containing the information required to service the client connection;

wherein excluding information includes excluding connection state information, send and receive queue information, a routing disconnect indication, and a routing information for the connection.

Application/Control Number: 09/637,400

Art Unit: 2157

11. (Currently amended) A method for increasing the throughput of a server capable of servicing at least one TCP/IP connection, the server establishing a TCP/IP Transmission Control Block (TCB) of a size and containing information sufficient to identify and service the connection with a client, comprising:

closing the at least one TCP/IP connection between said client and said server;

forming a Timed-Wait TCB (TWTCB) of a size less than the TCB; and

excluding information from the TCB not required to identify the client connection
to form a timed-wait state TCB (TWTCB) for a time-wait period;

releasing the TCB for use by the server;

wherein forming the TWTCB includes excluding information includes excluding a connection state information, send and receive queue information, a routing disconnect indication, and a routing information for the connection.

18. (Currently amended) A computer readable medium-having storing computer-executable instructions for servicing at least one TCP/IP connection with a client and a server, the server creating a TCP/IP Transmission Control Block (TCB) stored in non-paged pool (NPP) memory containing information required to identify and to service the client connection, said computer executable instructions when executed performing steps comprising:

closing a TCP/IP connection;

excluding information from the TCB not required to identify the client connection to form a timed-wait state TCB (TWTCB) for a time-wait period; and

Application/Control Number: 09/637,400

Art Unit: 2157

releasing the NPP memory containing the information required to service the client connection;

wherein excluding information includes excluding connection state information, send and receive queue information, a routing disconnect indication, and a routing information for the connection; and

copying less than all information stored in a TCP/IP Transmission Control Block
(TCB) into a Timed Wait TCB (TWTCB); and

maintaining the TWTCB for a timed wait period to avoid late routed packets from establishing a new connection with a server;

wherein copying less than all information includes excluding a connection state information, send and receive queue information, a routing disconnect indication, and a routing information for the connection.

- 5. Claims 1-4, 7-14 and 17-21 are allowed.
- **6.** The following is an examiner's statement of reasons for allowance:

The prior art of record does not teach neither singly or in combination the limitation "excluding information from the TCB not required to identify the client connection to form a timed-wait state TCB (TWTCB) for a time-wait period; and wherein excluding information includes excluding connection state information, send and receive queue information, a routing disconnect indication, and a routing information for the connection" as in claims 1-4, 7-14 and 17-21.

7. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Application/Control Number: 09/637,400

Art Unit: 2157

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hussein A. El-chanti whose telephone number is (571)272-3999. The examiner can normally be reached on Mon-Fri 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ario Etienne can be reached on (571)272-4001. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
